## Are you looking for BETTER DATA FASTER?

PXGEO's Cirrus™ brings you closer to your seismic data, enables informed exploration decisions to be made in near real-time.

Cirrus<sup>™</sup> is a suite of cloud-based seismic data management services designed to bring our clients better data faster and thereby shortening the exploration cycle.

## CIRRUS ACQUISITION MANAGEMENT

The Acquisition Management platform ensures optimization of the project workflow, using an intuitive web interface, clients can access all relevant project details.

Access to project data

Optimized info. workflow

Improved quality assurance

ACCESS TO SURVEY DATA

## CIRRUS DATA STREAMING

Our Data Streaming solution provides near real-time access to seismic survey data during the acquisition phase. This enables onshore quality control and access to high fidelity seismic data, allowing project decisions to be made faster.

Secure streaming

High fidelity compression

Near real-time access

HIGH QUALITY SEISMIC DATA FASTER

## CIRRUS PRIORITY PROCESSING

Our Priority Processing utilizes the latest processing features and algorithms as well as the scalability of cloud computing to tackle all our clients imaging needs in a fraction of the time compared to conventional processing workflows.

Deblend & full broadband

Advanced de-multiple

High resolution imaging

REDUCED INTERPRETA-TION TIMELINE

FASTER DECISIONS

**BETTER RESULTS**
